

Brainstorming & Ideation

Date	26 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being

Empathy Map

User

Researchers, students, educators, policy analysts, government organizations, and individuals interested in analyzing a country's human development.

Says

- "I want to know the Human Development Index of a country."
- "Can I predict HDI using a few indicators?"
- "I need a simple tool that provides quick and accurate predictions."
- "I want an easy-to-use web application."

Thinks

- "Manual calculation of HDI is time-consuming."
- "Machine learning can simplify the prediction process."
- "The prediction should be reliable and easy to understand."
- "The application should classify the country's development level."

Does

- Enters the country name.
- Provides Life Expectancy at Birth.
- Enters Mean Years of Schooling.
- Provides Gross National Income Per Capita.
- Clicks the Predict button.
- Views the predicted HDI value and Human Development category.

Feels

- Confident using a simple interface.
- Satisfied with quick prediction results.
- Curious about how different factors influence HDI.
- Encouraged to compare development indicators across countries.

Pain Points

- Manual HDI calculations are complex.
- Difficulty understanding relationships between development indicators.
- Existing tools may be difficult to use or require technical knowledge.
- Finding reliable HDI estimates can take time.

Gains

- Fast and accurate HDI prediction.
- User-friendly web interface.
- Better understanding of factors affecting human development.
- Supports learning, research, and decision-making through data-driven insights.
