

Problem-Solution Fit

Date	29 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviours, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] • Researchers • Students • Educators • Policy Analysts • Government Organizations • NGOs • Data Analysts	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] • Limited knowledge of Machine Learning. • Difficulty understanding HDI calculations. • Limited access to analytical tools. • Time constraints for manual analysis.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] Pros • Official UNDP reports are reliable. • Government databases provide authentic data. • Statistical software offers detailed analysis. Cons • Manual calculations. • No instant prediction. • Complex for non-technical users. • Limited interactivity.
--	---	---

2. PROBLEMS / PAINS

- + ITS FREQUENCY [PR]
- Manual HDI calculation is time-consuming.
- Difficult to analyze multiple development indicators.
- Existing reports are static and not interactive.
- Requires technical knowledge to interpret data.
- Lack of quick prediction tools.

9. PROBLEM ROOT / CAUSE [RC]

- HDI depends on multiple socio-economic indicators.
- Manual computation is complex.
- Existing tools are not user-friendly.
- Data interpretation requires expertise.
- Lack of automated prediction systems.

7. BEHAVIOR

+ ITS INTENSITY [BE]

- Frequently searches for HDI information.
- Uses online datasets and reports.
- Compares development indicators.
- Relies on prediction tools for analysis.

3. TRIGGERS TO ACT [TR]

- Need for instant HDI prediction.
- Academic research and analysis.
- Country development comparison.
- Decision-making based on development indicators.
- Learning Machine Learning applications.

10. YOUR SOLUTION [SL]

Develop a **Machine Learning-based Human Development Index Prediction System** using **Linear Regression** and **Flask**. The application accepts user inputs, predicts the HDI value, classifies the Human Development category, and provides results through a simple, responsive web interface, enabling fast, accurate, and user-friendly analysis.

8. CHANNELS OF BEHAVIOR [CH]

Online

- Flask Web Application
- GitHub Repository
- UNDP Website
- Kaggle Dataset

Offline

- Academic Books
- Research Papers
- Classroom Learning
- Project Documentation

4. EMOTIONS

BEFORE / AFTER [EM]

Before

- Confused
- Curious
- Frustrated
- Time-consuming process

After

- Confident
- Satisfied
- Informed
